BYRON GREEN LIGHTS

WIRING SYSTEM

The Light This Light That system is a simple wiring system to assemble and disassemble. All wiring is designed with moulded connections which required a plug in action (by hand) and a screw on seal to protect the connection from the elements (waterproof). There is no need for soldering.

There are 2 different wire sizes: the thicker (18 gauge) is used in the main Harness and the thinner (20 gauge) is used for all fittings associated with the lights. The system is designed to minimise energy consumption of the system, and in basic terms, if the connection doesn't fit, it doesn't belong. The plugs can only go in one way and there is a tiny (+) for positive and (-) moulded in the connection points for the inquisitive with good eye sight.

All accessories, such as Remote Control system, Sensors, Timers, Power Supplies etc have a Harness wire connection interface and always is connected with the main Harness wire.

Some 'harness' parts have a moulded light connection port(s) on the wire. These are connection points for lights. All lights are manufactured with a 900mm lead with plug, unless customised differently by order. All light wiring connections can only connect to light related parts such as light extension wire (to extend up a tree) and light splitters (to add 2 or more lights per light connection on a harness).

MAIN HARNESS (18 GAUGE)

	CODE AWH1CN	DESCRIPTION Harness 1CN (18 gauge)	DIMENSION 1500mm	APPLICATION Part of the main harness line. Enables 1 direct light connection, or light splitter to add 2 or more lights.
	CODE AWH4CN	DESCRIPTION Harness 4 CN (18 gauge)	DIMENSION 6112mm	APPLICATION Part of the main harness line. Enables 4 direct light connections, or light splitter to add 4 or more lights.
	CODE AWHE5000	DESCRIPTION Harness Extend 5000 (18 gauge)	DIMENSION 5000mm	APPLICATION Part of the main harness line. Enables harness to be extended 5000mm where light connection points are not required.

BYRON GREEN LIGHTS

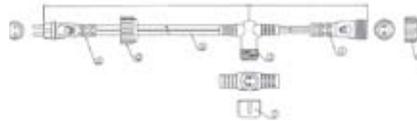

WIRING SYSTEM

HARNESS LOOPING

For Voltage Drop

If the Harness covers a very long distance, (determined by number of lights and distance), there may be a small voltage drop issue which may not be obvious to the naked eye as it is with halogens. Whilst not obvious to the naked eye, and rarely detrimental to the light effect, the Harness zone may be looped to balance the voltage.

This may not be needed even with distances up to 100 meters, due to the ultra energy efficient design of Light This Light That LED lights, but may occur at 50 meters if ample lights are connected to the main Harness. Voltage drop can be determined by using a Clamp meter or Multi meter (see tools). The use of the Harness Looper can solve the issue if desired. The drop in voltage will not damage the lights. Use of the Harness Looper is discretionary.

HARNESS WIRING ACCESSORIES (18 GAUGE)

	CODE	DESCRIPTION	DIMENSION	APPLICATION
	AWHL1B	Harness Looper 1 (18 gauge)	300mm	Part of the main Harness. Enables harness to be looped to balance voltage. Used for very long lines.

	CODE	DESCRIPTION	DIMENSION	APPLICATION
	AWHL1B	Harness Looper 1 boxed (18 gauge)	w60(L)x30(W) x20(D)	Part of the main Harness. Boxed, enables harness to be looped to balance voltage. Used for very long Harness lines.

	CODE	DESCRIPTION	DIMENSION	APPLICATION
	AWHL2B	Harness Looper 2 boxed (18 gauge)	w110(L)x65(W) x35(D)	Part of the main Harness. Boxed, enables harness to be looped to balance voltage. Used for 2 very long Harness zones/lines.

BYRON GREEN LIGHTS

WIRING SYSTEM

LIGHT WIRING (20 GAUGE)

The Light Wiring parts are directly associated with the light fitting and light connection points on the main Harness. This is recognised by the typically thinner wire used for lights (20 gauge). All light fittings are manufactured with a 900mm lead with connection plug ready to be plugged into a Harness light connection point. The length of the light lead can be customised longer or shorter to suit customer needs, by order only.

LIGHT WIRING (20 GAUGE)

CODE	DESCRIPTION	DIMENSION	APPLICATION
------	-------------	-----------	-------------

AWLE3660	Light Extend 3660 (20 gauge)	3660mm	Part enables further distance away from the harness connection where the 900mm light lead is too short. Eg used to extend up into trees or fences.

AHHWCB	Harness Wire Connector	Blue 3 M wire connector	Connector with IP68 capability used to connect Light or Harness wire when customising, repairing or making Light splitters.

BYRON GREEN LIGHTS

POWER SUPPLY

Power Supplies are also referred to 'Transformers' because they convert or transform from 240V AC to 12V DC, or also known as 'Drivers', as they use the correct Voltage to drive an electronic system.

All Light This Light That LED lights are driven by 12 V DC regulated current. These Power Supplies are designed specifically to drive LED lights hence why they are regulated and DC (Direct Current).

Every light system requires a 12V DC Power Supply to drive the light system. If an existing AC Transformer is already installed (usually to drive old halogen garden lights), then providing it is in good working order, the part can still be used on the Light This Light That system. The installation of a Converter as an interface between the AC Transformer will convert the 12V to DC.

All Power supplies are supplied with a Power plug, (which plugs directly into a power point) and a Harness connection plug, to continue (start) the main Harness. Remote Controls, Timers, Sensors and lights are connected after the Power Supply has been connected to the power point, (unless a converter is used with an existing Power Supply).

Power Supplies are available for Indoor or Outdoors and vary in size and capacity and start from a minimum 500mA. All outdoor Power Supplies are rated IP 65 (weatherproof).

OUTDOOR POWER SUPPLY

	CODE	DESCRIPTION	DIMENSION	APPLICATION
	APS2.5WP	2.5 Amp 12V DC Power Supply WP	200(L)x30(W) x20(D) 1500mm AC lead 1 Harness connection plug	Part used to drive up to 2 Amps or 2300 miliAmps (see light Spec Sheets). Can be situated outdoors IP 65.
	APS5.0WP	5 Amp 12V DC Power Supply WP	180(L)x70(W) x50(D) 1500mm AC lead 1 Harness connection plug	Part used to drive up to 5 Amps or 4800 miliAmps (see light Spec Sheets). Can be situated outdoors IP 65.
	APS10.0WP	10 Amp 12V DC Power Supply WP	235(L)x135(W) x65(D) 1500mm AC lead 4 Harness connection plugs	Part used to drive up to 10 Amps or 9800 miliAmps (see light Spec Sheets). Can be situated outdoors IP 65.

BYRON GREEN LIGHTS

REMOTE CONTROL

A Remote Control System can be after the Power Supply and also allows main Harness connectivity.

A Remote Control System consists of 2 parts: Transmitter, commonly referred to as the Handheld Remote Control, which transmits the command 'off' or 'on', and a Receiver to accept the command for the light system.

A Remote Control can have up to 8 different channels, which means the person with the transmitter choose to activate different zones at different times to suit their preferences, or just to save energy. There's nothing stopping the user to connect certain channels to other non lighting related electronic devices, such as gate, spa...

OUTDOOR REMOTE CONTROL SYSTEM

CODE	DESCRIPTION	DIMENSION	APPLICATION

BYRON GREEN LIGHTS

TIMER-SENSOR

A Timer or sensor mechanism is a programmable electric instrument enabling the user to set predetermined commands such as when to turn the light system on or off. These can be set by a light sensor, sensing dusk and turning on at dusk for desired period, timers which determine actual time the light system turns on and off, or motion sensors which activate lights when a person passes the sensory instrument.

TIMER-SENSOR

CODE	DESCRIPTION	DIMENSION	APPLICATION
ATSHPMWP	Sunset Timer	100(L)x60(W) x35(D) 1 Harness connection plug in and out	Part used to recognise sunset and trigger the light system on. Can be set to turn off in 2, 4 or 6 hours. Can be situated outdoors. IP 65

CODE	DESCRIPTION	DIMENSION	APPLICATION
ATSRWP		Custom	Timer with a built in Remote control override. When timer turns light system off, the remote control can override the timer's preset command.

CODE	DESCRIPTION	DIMENSION	APPLICATION
ATSMWP		Custom	Motion sensor detects motion and activates lights for pre programmed time period before they automatically turn off.

BYRON GREEN LIGHTS

MOUNTING

The Light This Light That Lights can be fixed or positioned in a variety of places and situations. There are mounts to fix or position lights for gardens, walls, trees and water features. Garden spikes (below) are screwed onto the back of the garden light range. They are available in different lengths for different applications and can be bent to customise precise light direction.

All lights come packaged with a standard 200mm spike for large lights (LT 12, 21 & 30) and 150mm for smaller lights (LT 1, 3, & 6)

SPIKE MOUNTS

BYRON GREEN LIGHTS

MOUNTING

Basically a stake is a 19mm tube pipe made in 316 Marine Grade Stainless steel or Solid Copper. The stake is used for mounting the garden light with mounting spikes to reach a desirable height exceeding 1000mm, otherwise not achieved with the spikes which come packaged with the garden lights, or by the longer spike mount accessory. The Mounting stake gives the light a strong mount whilst maintaining required aesthetics.

BYRON GREEN LIGHTS

MOUNTING

Light This Light That lights are designed to be positioned underwater (IP 68). This means the light can be positioned or fixed in ponds, streams, under piers or water features in a variety of ways. This includes drilling spikes into the pond wall or floor for stability, or better still, the method least susceptible to damage water proofing is the use of Pond Plates. All pond plates are made of thick and heavy Marine Grade Stainless Steel, as aluminium is susceptible to reacting in water (albeit not corrosive) and Copper may not be suitable for marine life. The weight of the pond lights give the pond light stability, and are easy to move.

POND MOUNTS

CODE	DESCRIPTION	DIMENSION	APPLICATION
AMPPL	Large Pond Plate	100mm(L)x 50&100mm(W) x10(D)	Part used to fit garden light in water features. It is easier to mount and easy to move. Most important is the plate acts like a weight and gives the light stability. Made for large sized lights

CODE	DESCRIPTION	DIMENSION	APPLICATION

BYRON GREEN LIGHTS

TOOLS

There are essential tools of the trade apart from the ubiquitous hammer and screw driver. Basic tools required to enable measuring light faults, voltage drop, lead free and static free soldering and customising wiring configurations are available from Light This Light That.

Note LED lights are susceptible to static charges the same way computer boards are, and heat.

At Light This Light That, we look after the heat issue with good engineering and design, but out on the field, it is important to avoid any static discharge which may find its way into the lights. This is critically important when customising wiring configurations whilst lights are fitted in some parts of the wiring. The plug in connection features of the Light This Light That wiring system avoids any issues with static charges.

	CODE	DESCRIPTION Head Lamp	DIMENSION	APPLICATION To see at night, when working at night.
	CODE	DESCRIPTION Clamp Meter	DIMENSION	APPLICATION To determine Voltage running through wire
	CODE	DESCRIPTION Multi Meter	DIMENSION	APPLICATION To determine the voltage at any given point
	CODE	DESCRIPTION Crimpers	DIMENSION	APPLICATION To generate a perfect press for connectors when customising wiring configurations
